T. Janssen gave a great introduction to H1 & HERA yesterday

For this talk: 2006-2007 data,  $136 \text{ pb}^{-1}$ , 320 GeV

*I'll present a measurement of the electron-jet imbalance*

# Why electron-jet imbalance?

3

Born-level configuration, electron and jet are back-to-back

Typically, jets are studied in the Breit frame, where the Born-level configuration is discarded

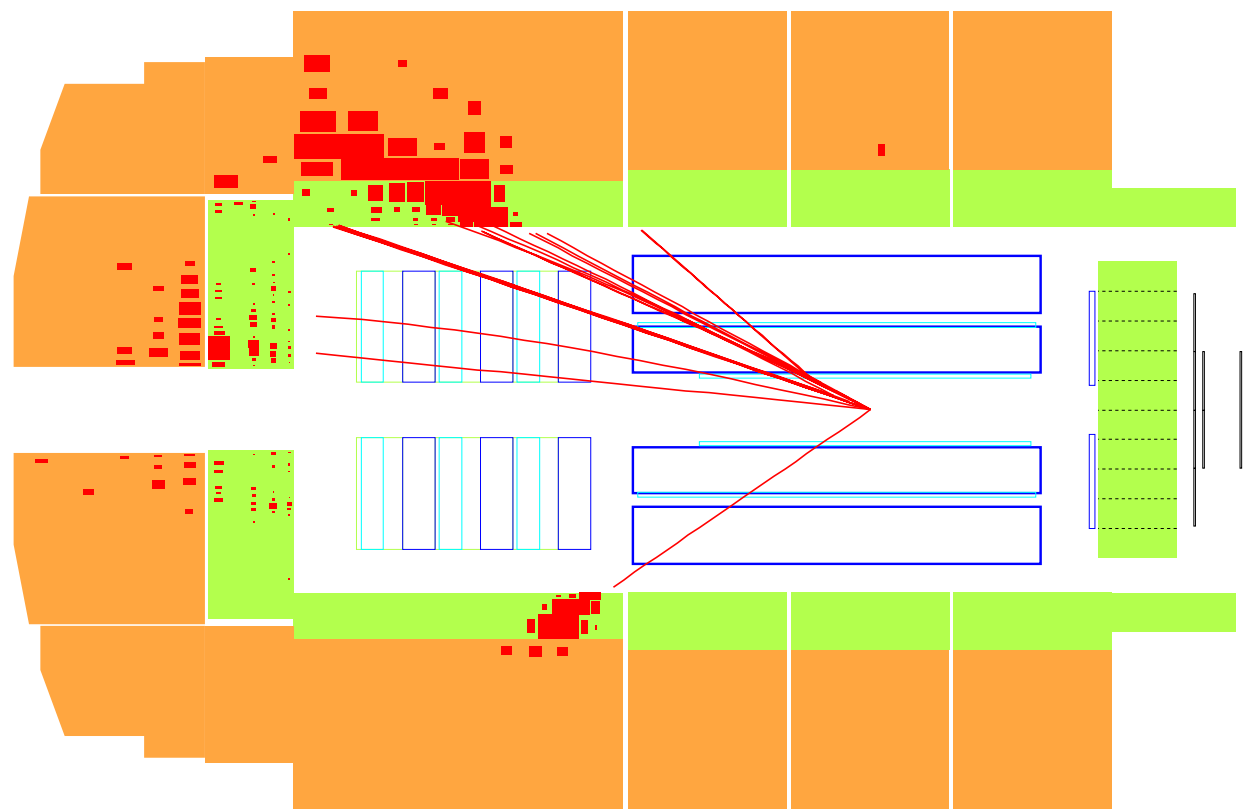

However, jet production in the lab frame can be useful for probing Transverse Momentum Dependent (TMD) Parton Distribution Functions (PDFs)

Energy flow algorithm (HFS)  
combines information from  
tracker and calorimeters

Neural network-based  
energy regression

1% jet energy scale  
uncertainty; 0.5-1% lepton  
energy scale uncertainty

Energy flow algorithm (HFS)  
combines information from  
tracker and calorimeters

Neural network-based  
energy regression

1% jet energy scale  
uncertainty; 0.5-1% lepton  
energy scale uncertainty

Challenge: **unfold multidimensional phase space**

Energy flow algorithm (HFS)  
combines information from  
imeters

Solution: **use deep learning!**

...can do unbinned, high (and  
variable-)dimensional unfolding

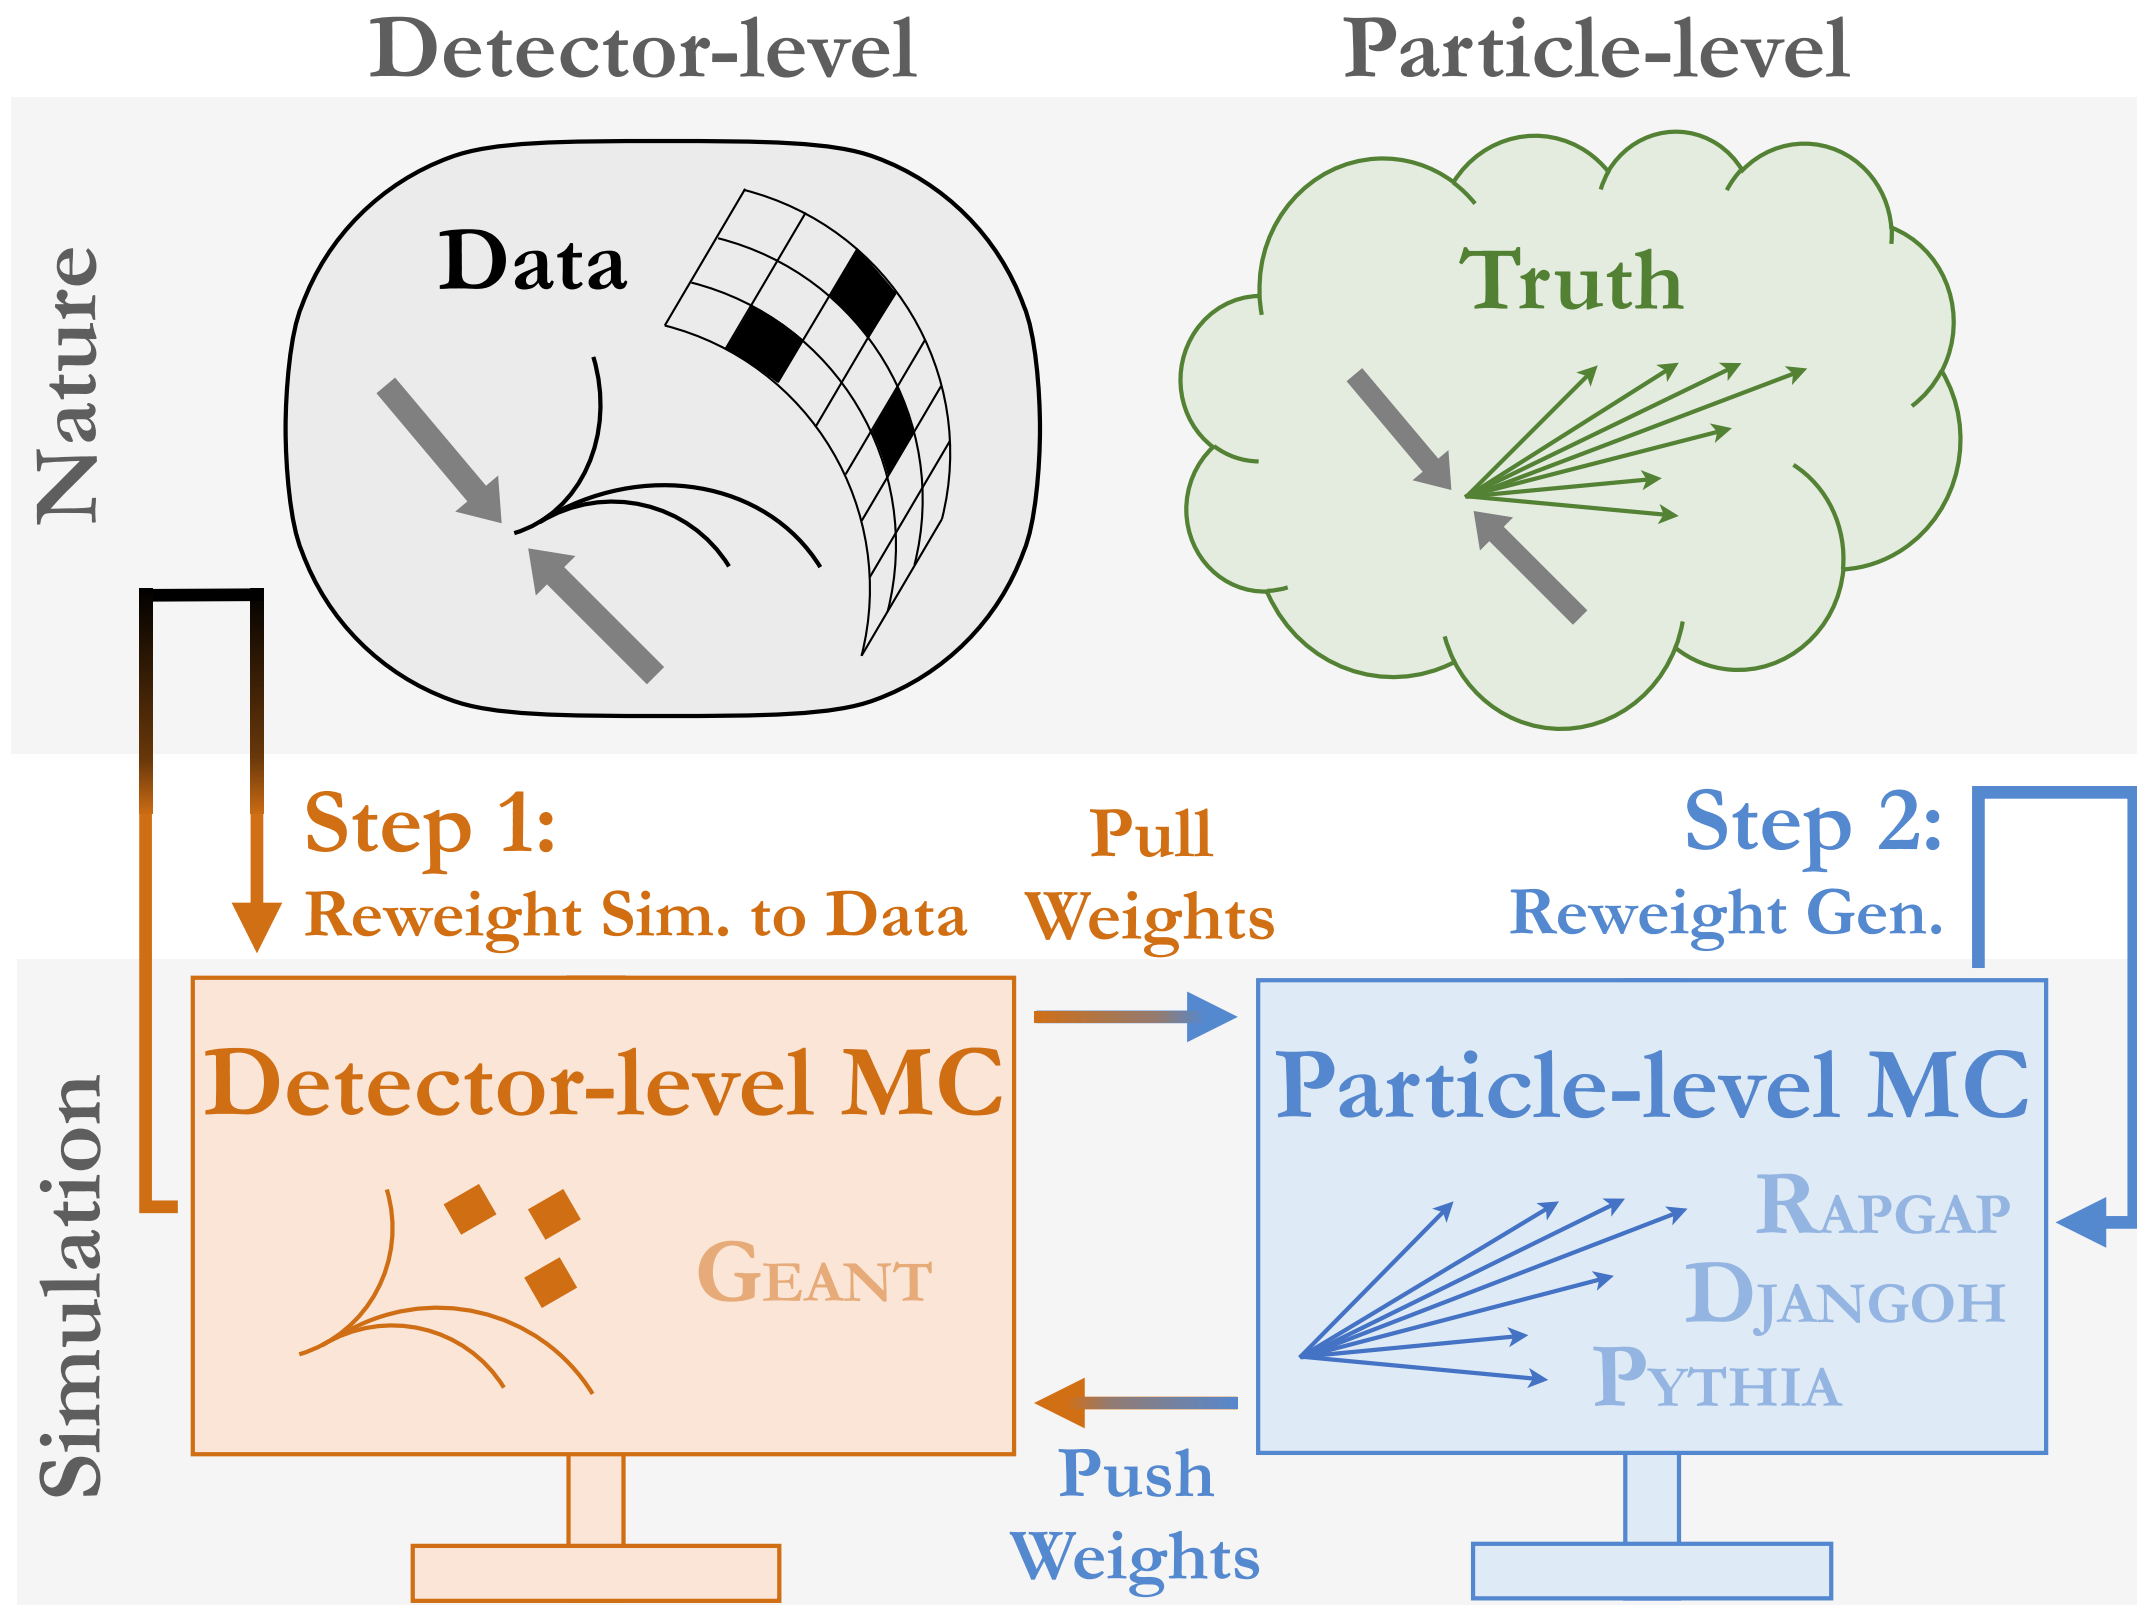

based  
sion

cale  
lepton  
uncertainty

Challenge: **unfold multidimensional phase space**

Push Weights

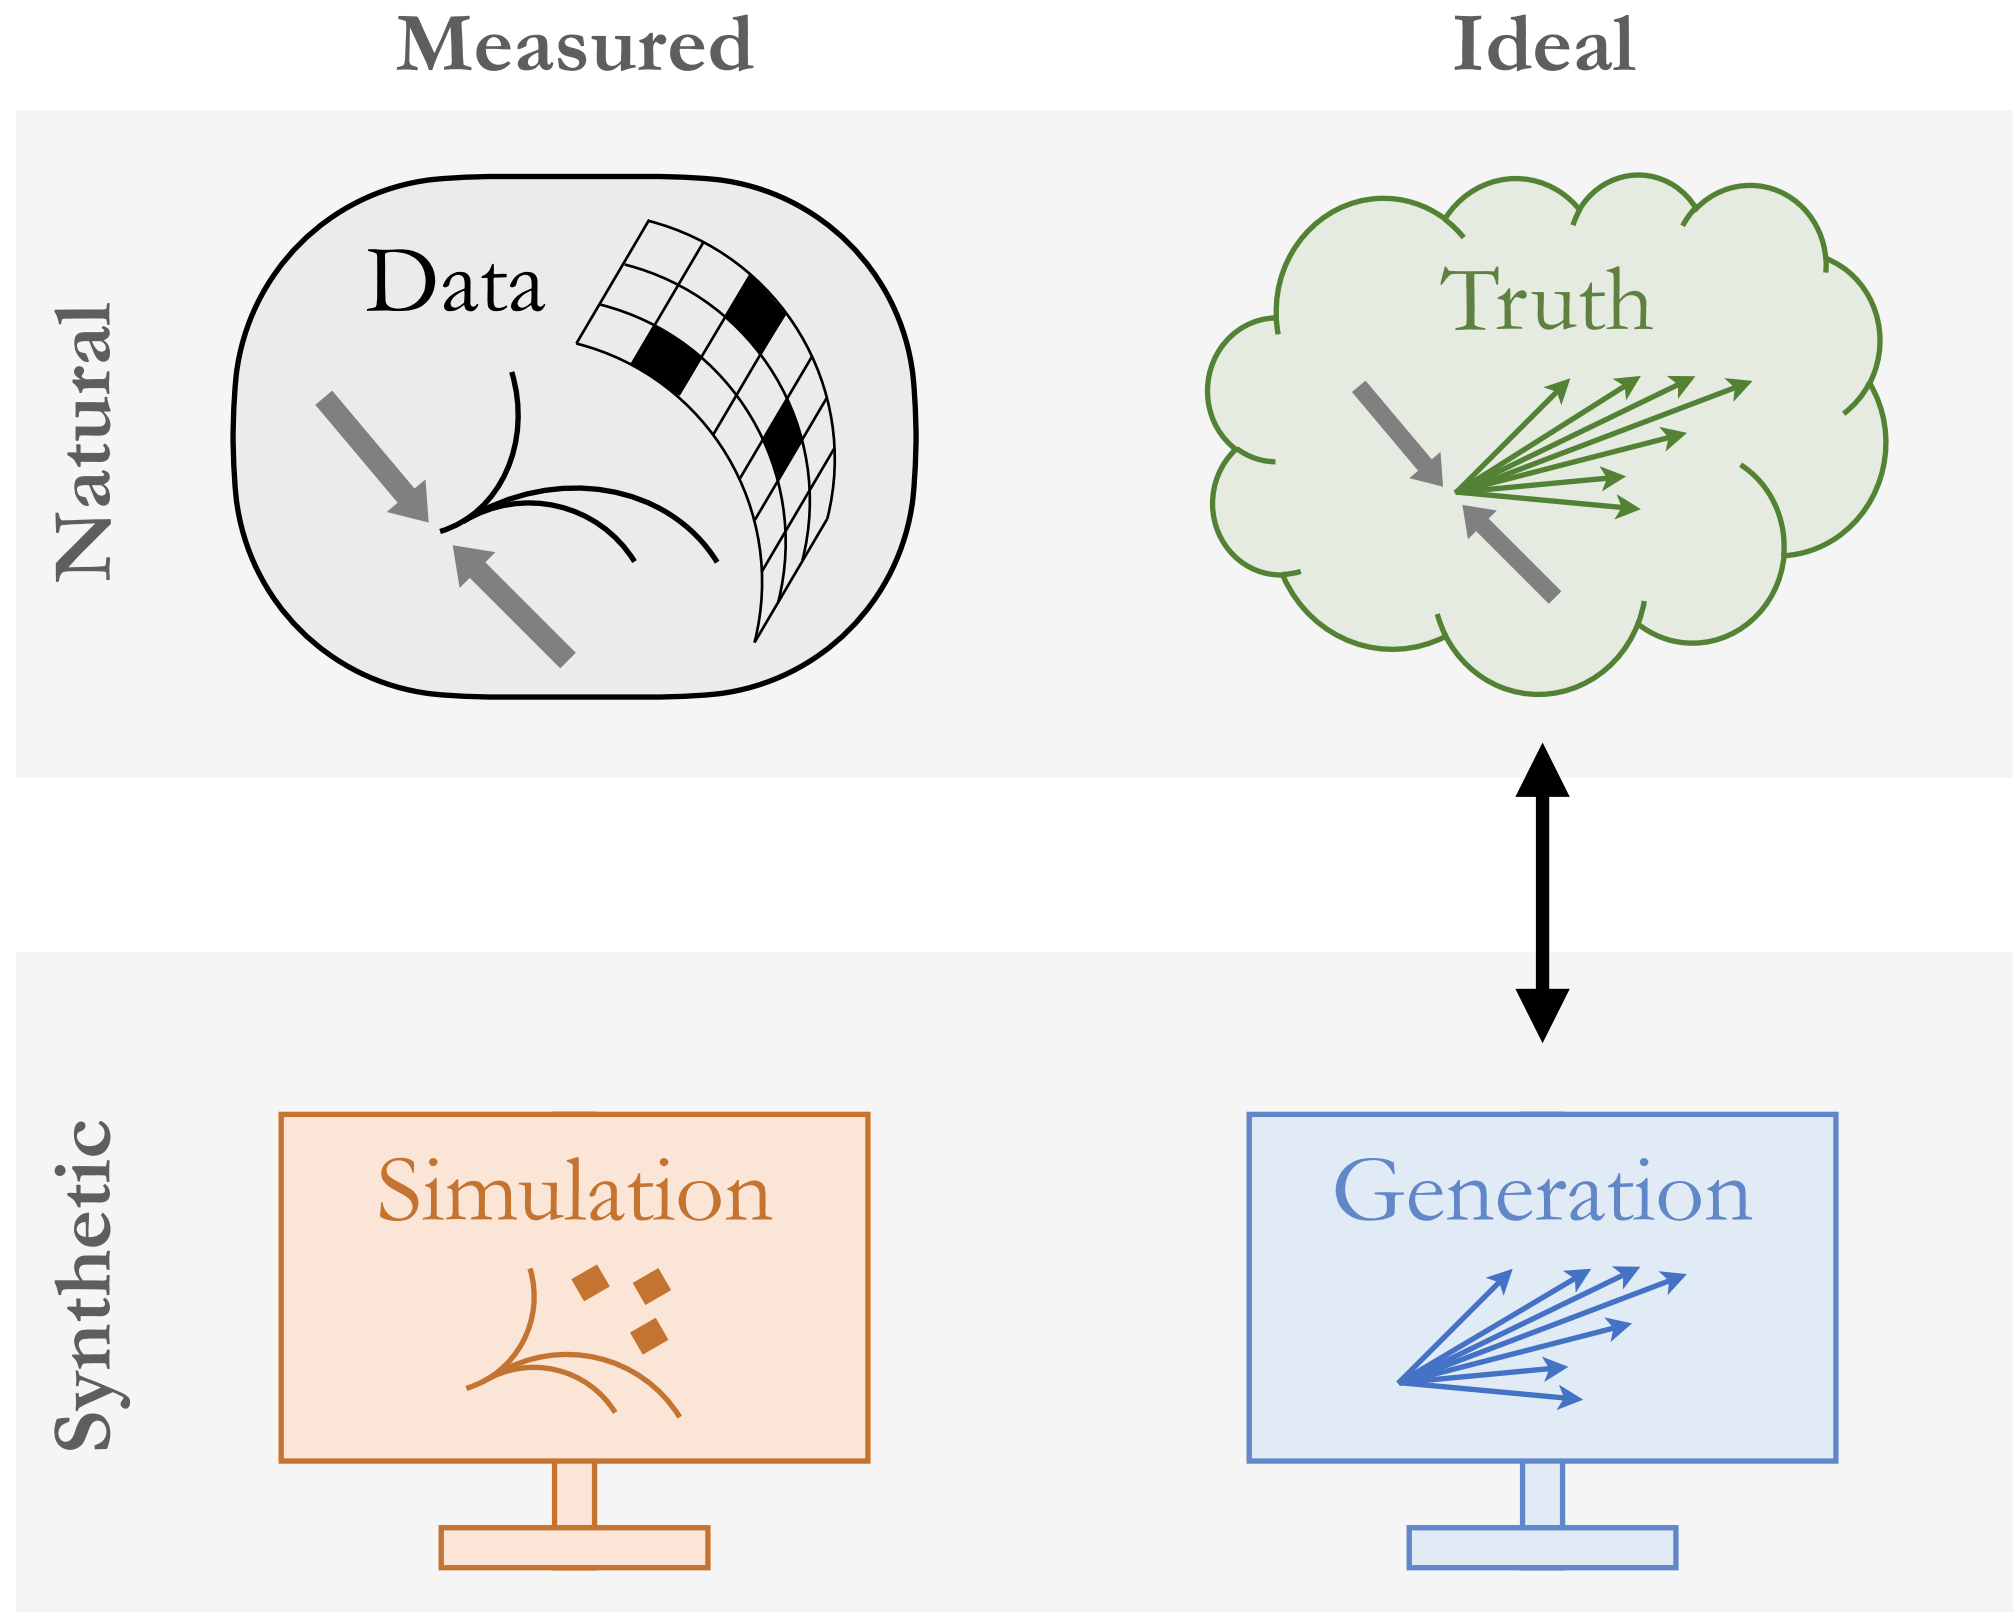

# Unfold by iterating: OmniFold

17

# Unfold by iterating: OmniFold

18

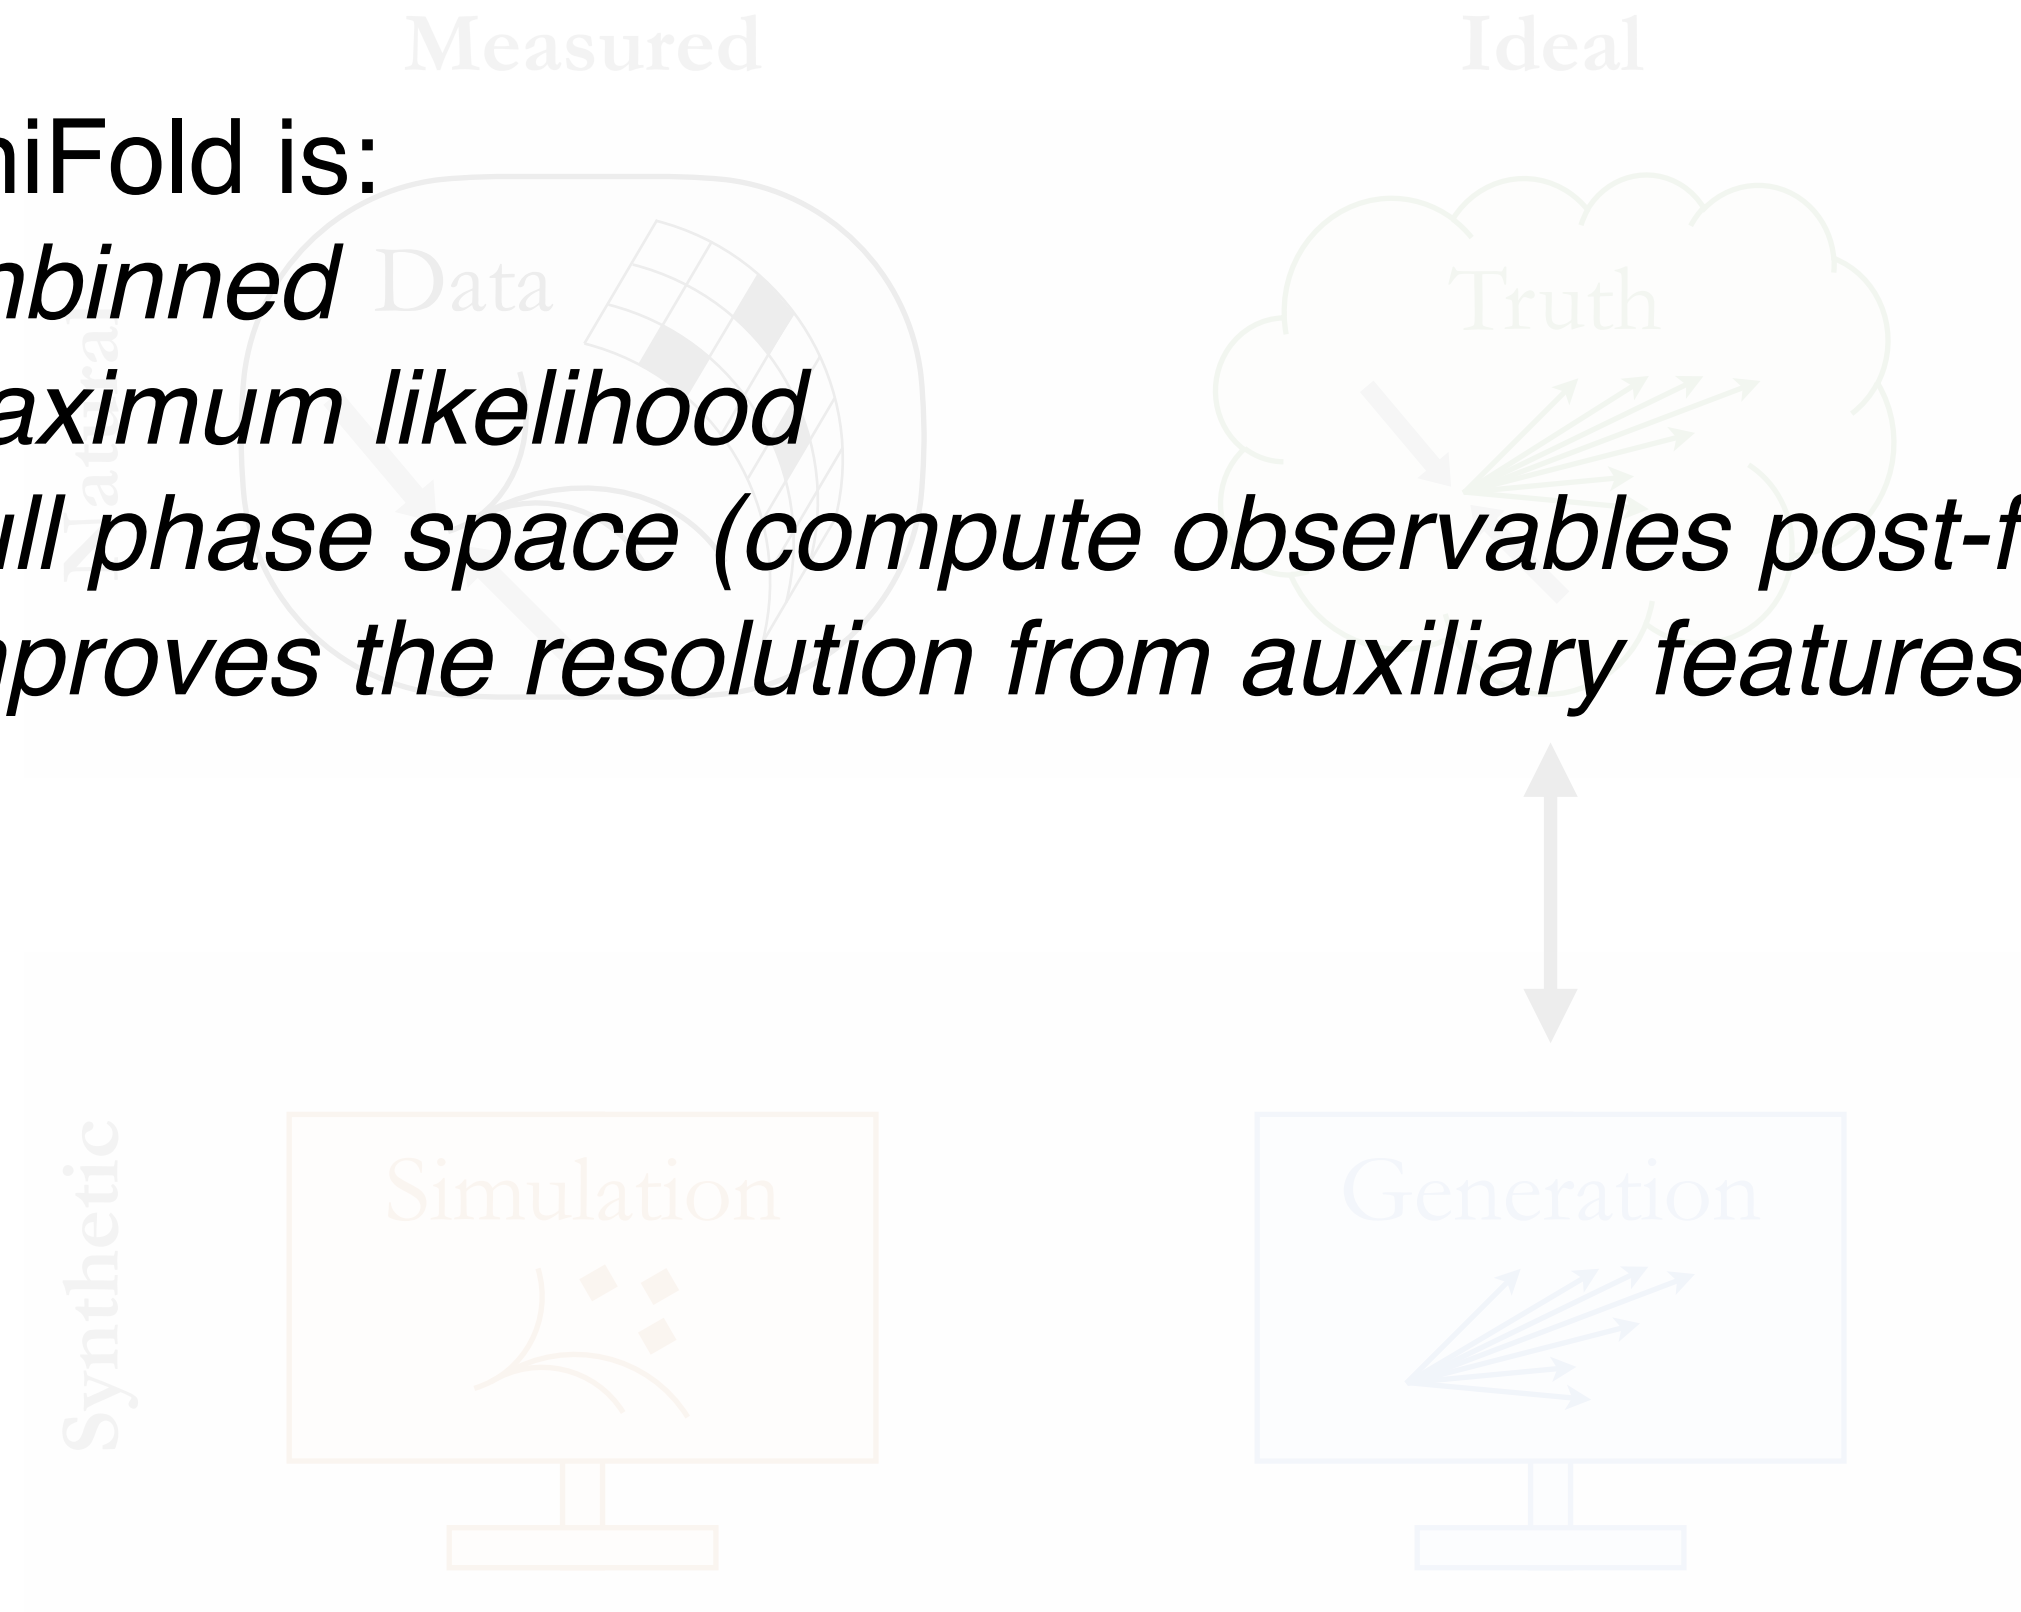

# Unfold by iterating: OmniFold

19

OmniFold is:

- *Unbinned*
- *Maximum likelihood*
- *Full phase space (compute observables post-facto)*
- *Improves the resolution from auxiliary features*

# Unfold by iterating: OmniFold

20

OmniFold is:

- *Unbinned*
- *Maximum likelihood*
- *Full phase space (compute observables post-facto)*
- *Improves the resolution from auxiliary features*

In this measurement: simultaneously unfold lepton and jet kinematics and report binned spectra for jet  $p_T$ ,  $\Delta\phi$ ,  $q_T/Q$ , and jet  $\eta$

# Classification for reweighting

21

Neural networks are naturally unbinned and readily process high-dimensional data.

*We use a trick whereby classifiers can be repurposed as reweighters*

N.B. the distribution is binned for illustration, but the reweighting is unbinned.

# Classification for reweighting

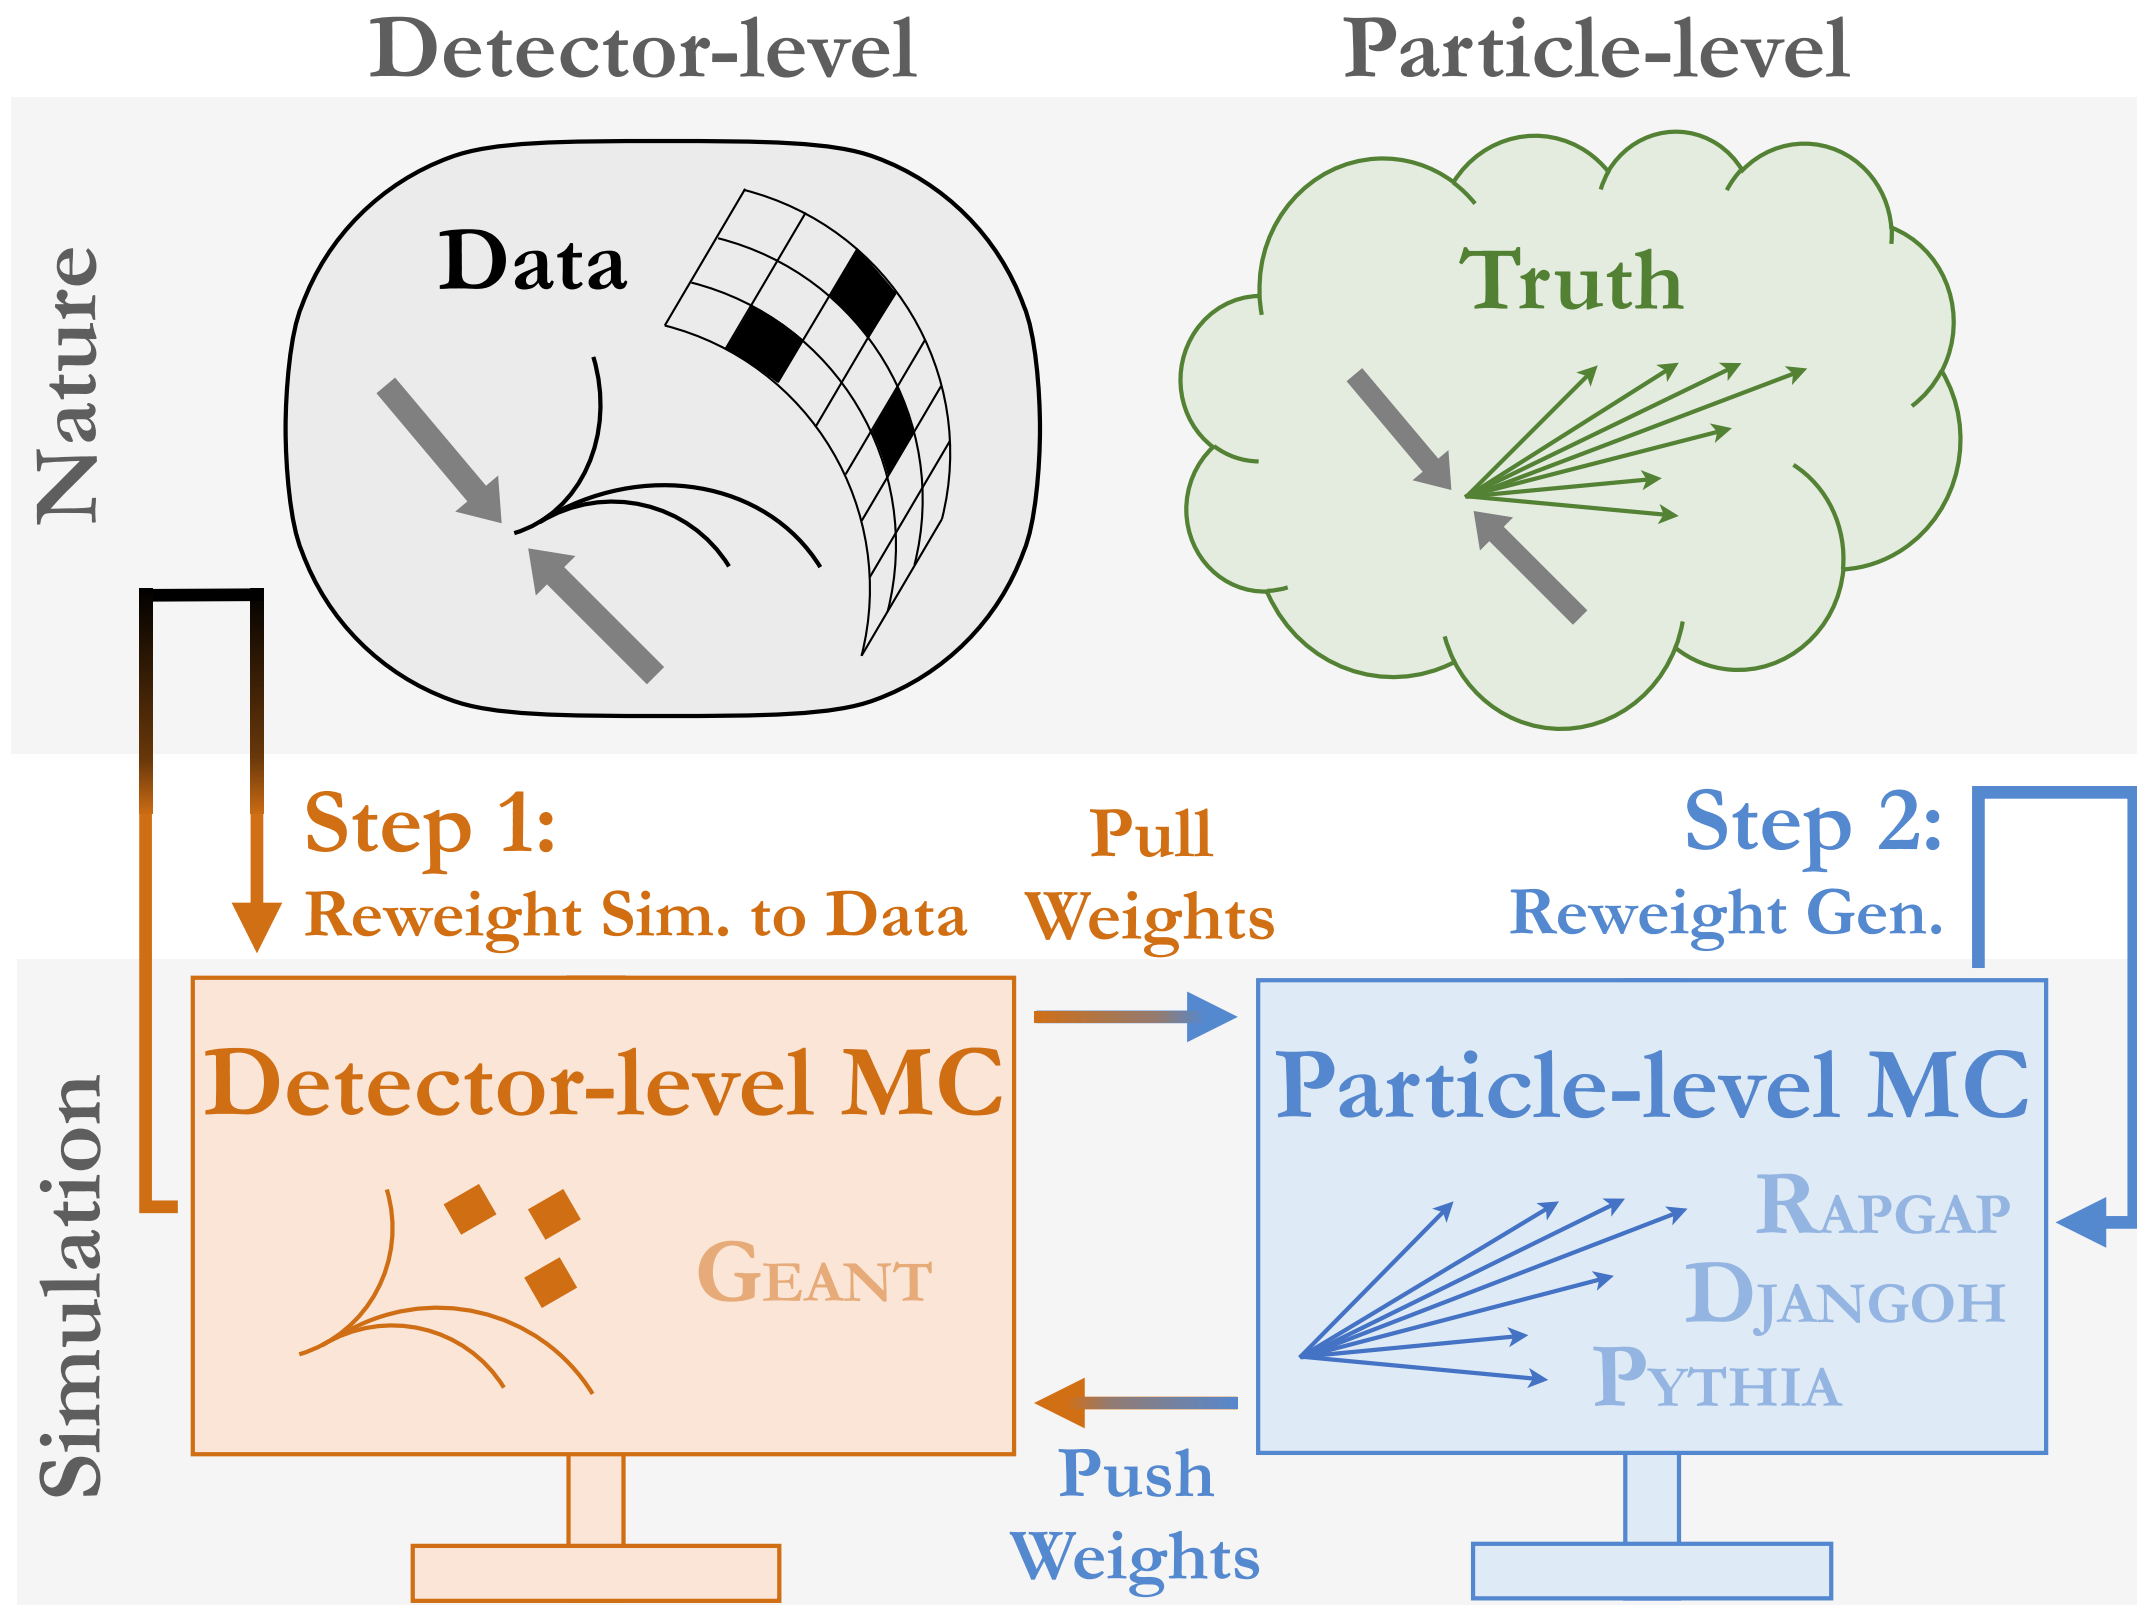

22

All of these distributions are simultaneously reweighted!

# Unfold by iterating: OmniFold

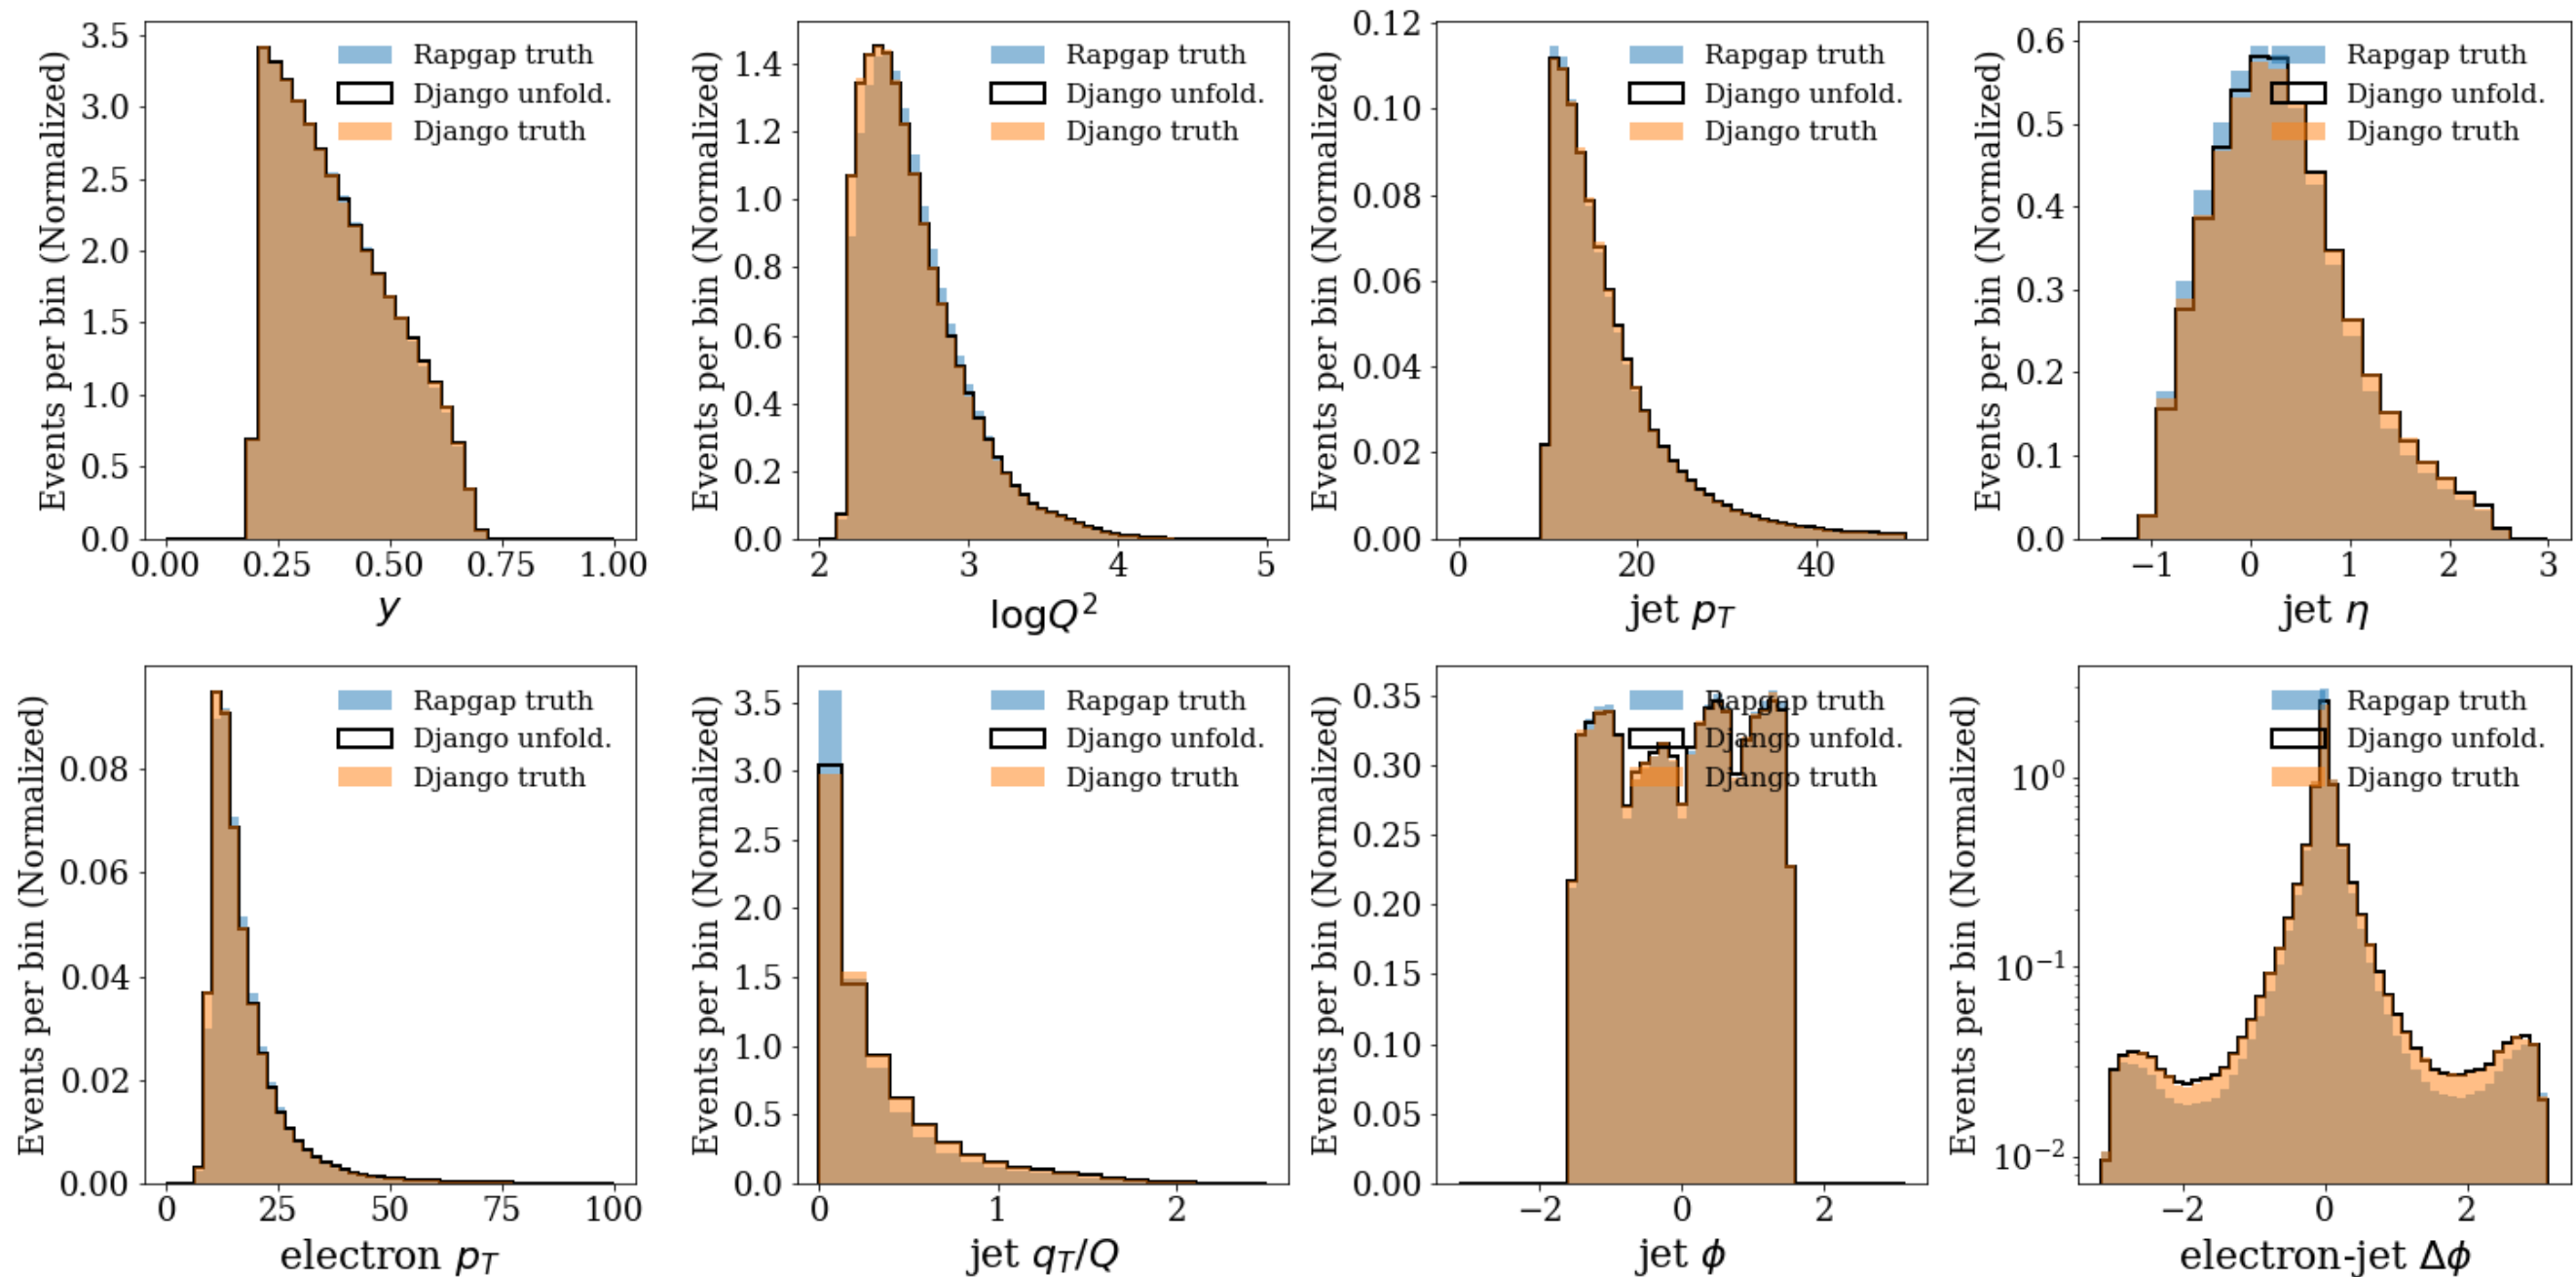

23

# OmniFolding *ep* simulations

24

We see excellent closure for the full phase space!

## **Measurement of lepton-jet correlations in high $Q^2$ neutral-current DIS with the H1 detector at HERA**

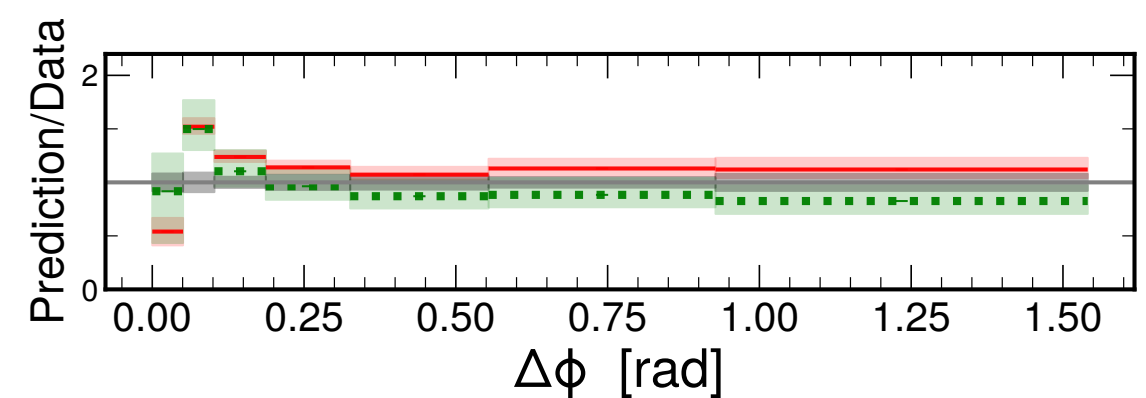

The H1 Collaboration

[https://www-h1.desy.de/h1/www/publications/  
htmlsplit/H1prelim-21-031.long.html](https://www-h1.desy.de/h1/www/publications/htmlsplit/H1prelim-21-031.long.html)

# Preliminary Results

26

see Sec. 9 in [our note](#) for theory citations

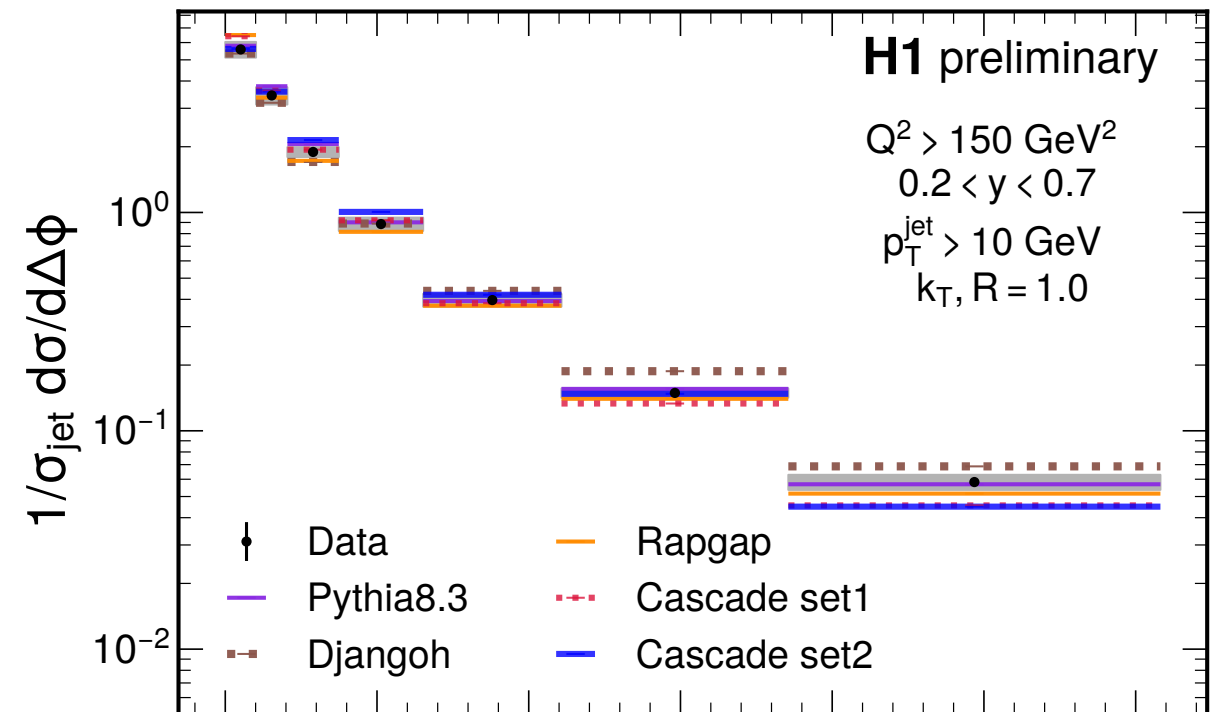

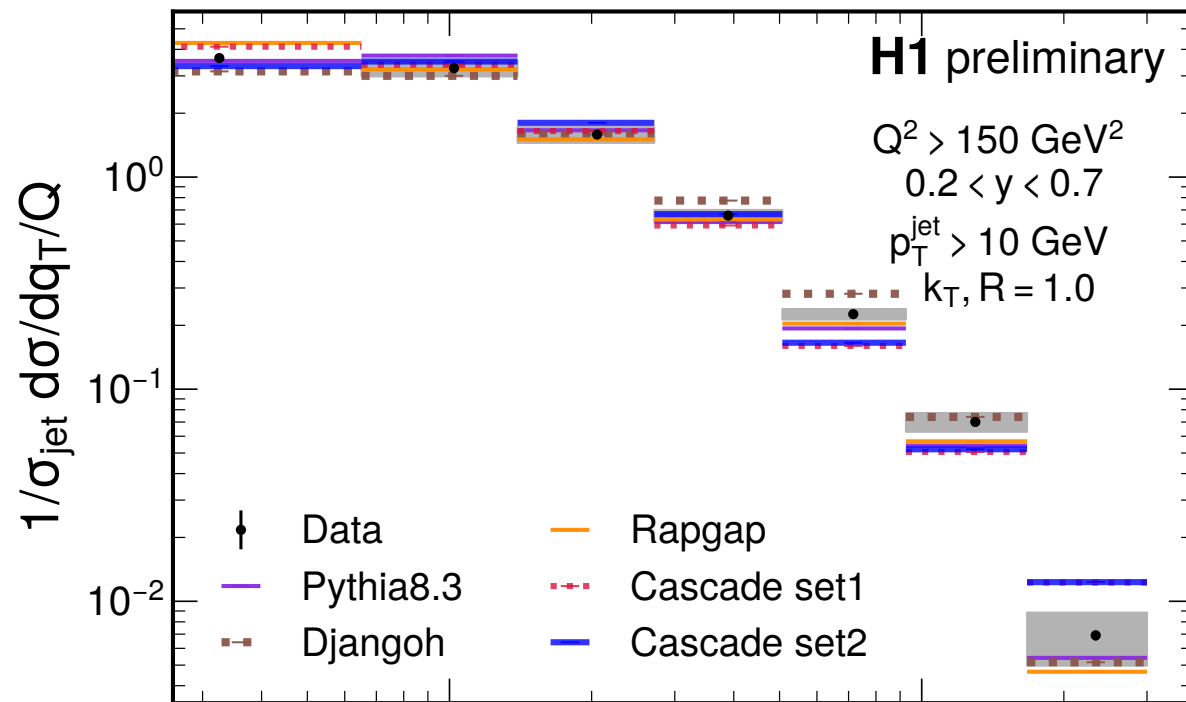

Excellent agreement with fixed order at high  $q_T$ ,  
excellent agreement with TMD prediction at low  $q_T$ .

# Preliminary Results

27

see Sec. 9 in [our note](#) for theory citations

Parton shower Monte Carlo programs also provide excellent agreement with the data across the spectra.

# Conclusions and outlook

28

Today, I have presented  
the first ML-based  
unfolding with collider data

*This is the start of an exciting  
program to advance our study  
of QCD into higher dimensions*

This particular measurement has important constraining  
power for TMD PDFs and provides important input to  
planning and design for the future EIC
